## SPECTRUM

June 9- August 15, 2005

Kashya Hildebrand Gallery presents the work of five European artists: Francois Jacques, Marc Rembold, Hans Kotter, Rob and Nick Carter, and Robert Schaberl in SPECTRUM for June 9- August 15, 2005.

The work of these five artists addresses the relationship of light and color with respect to space. Through the manipulation of light and color, these artists reconstruct space: the two dimensional pictorial plane coops the visual properties of the third dimension. The simplicity of form and color transport the viewer to a varied vastness beyond. It is here where the direct and peripheral spectrums emit a subtle echo, creating a calming and other-worldly effect. An altered perception and an altered space results, allowing the viewers to exist beyond themselves.
